

# Identify Windows System Architecture

Click on "Desktop" list

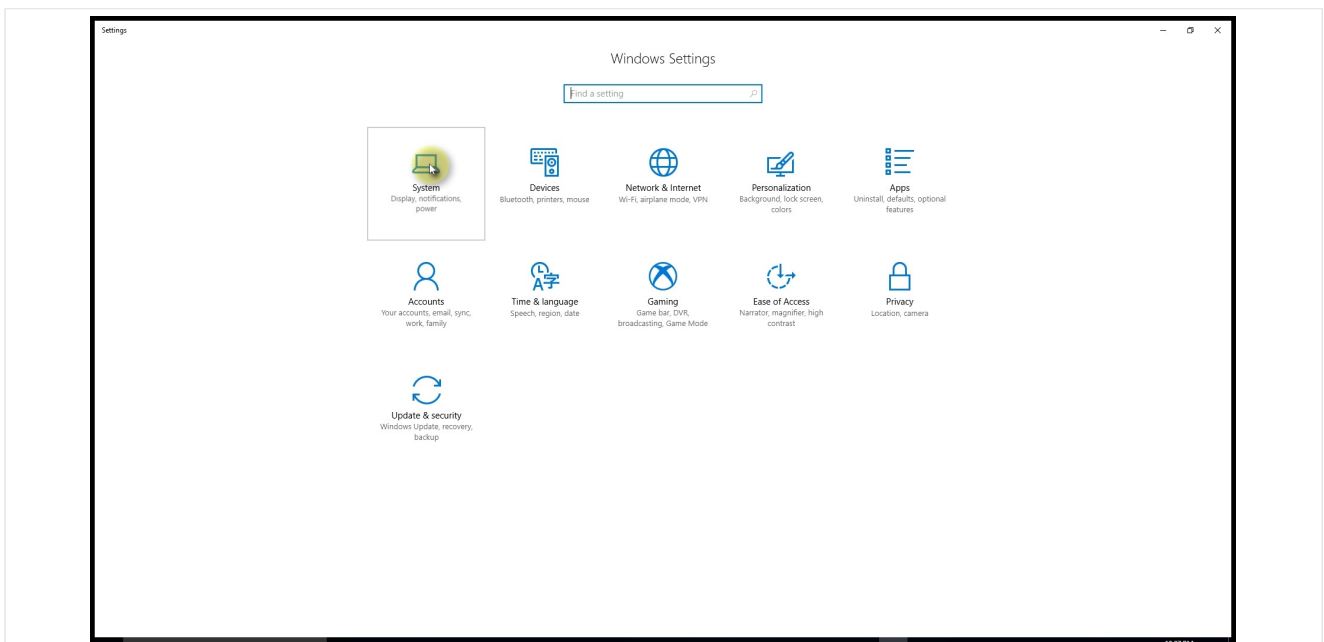

Click on the "Start" Button

Click - "Settings"

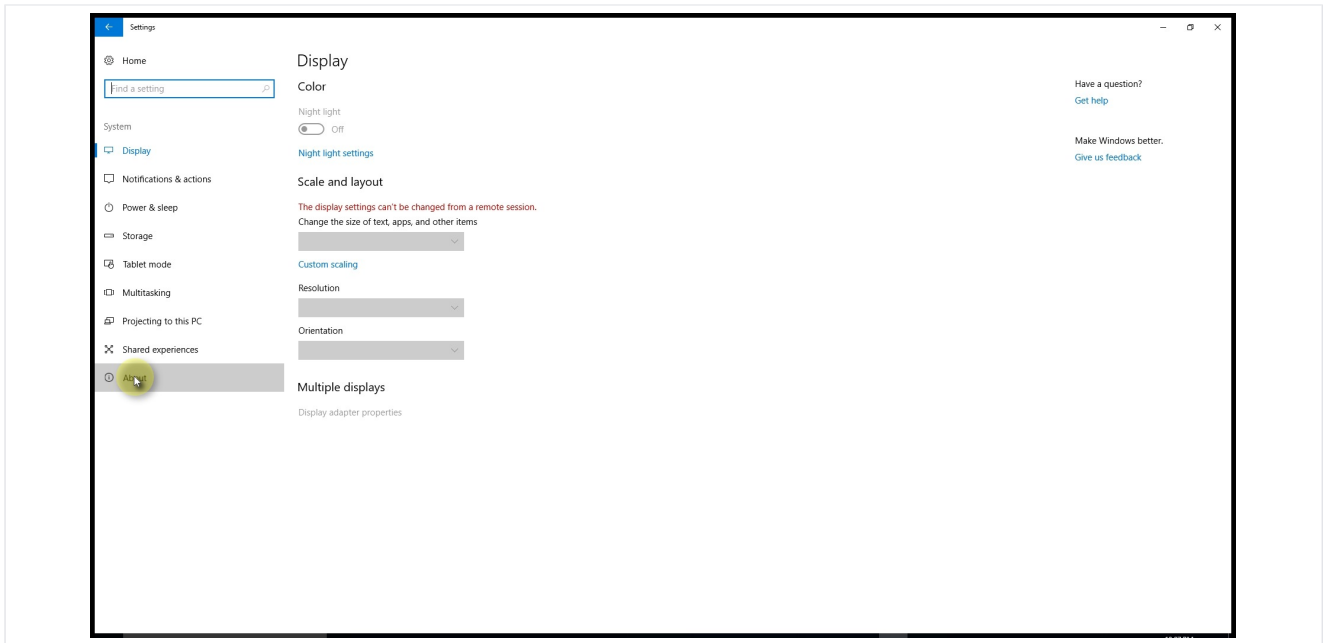

Click "Settings to go to the System Settings. In Windows 7 you will need to open - "Control Panel"

Select "System" item

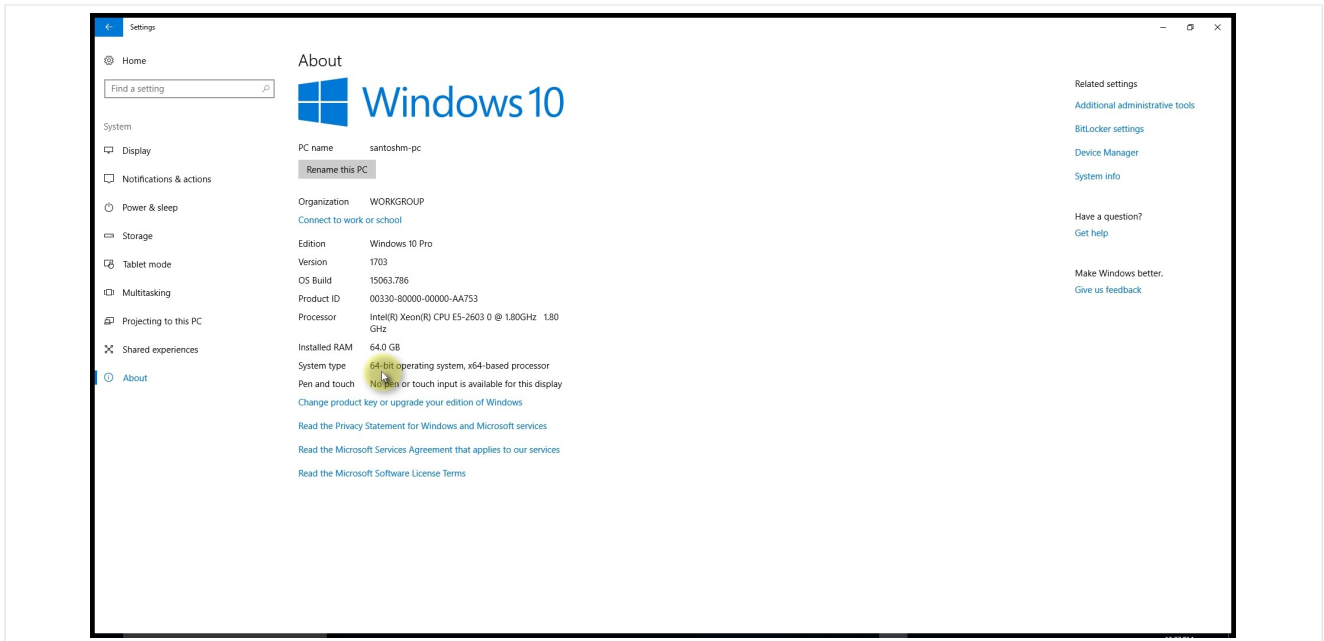

Click - System to open the System Settings

Click - "About"

Click "About" to get the information about the computer such as its name, description and system architecture

# Identify System Type / Architecture

Note down the System type.

In Windows there are two types of systems - 32-bit and 64-bit. Please ensure that you remember your system type as it is essential to install the publication container based on the system type.

Select 32-bit software for 32-bit system type

Select 64-bit software for 64-bit system type. Although you can install a 32-bit software on a 64-bit machine, please refrain from installing a 32-bit version on a 64-bit machine.
